Jeevantra - Key Offerings

Unified Patient Dashboard

Captures vitals and parameters from patient care devices. Provides a consolidated view of patient information, encompassing critical parameters, alarms, diagnosis, treatments, and best practices. Displays Early Warning Scores and trends for timely decision-making.

Enhanced Clinical Collaboration

Enables seamless nurse-doctor communication through integrated calls, empowering doctors with real-time patient data for informed decision-making. The mobile application provides instant notifications and convenient access to patient data.

Workflow Automation

Clinical Rule Engine to process patient's vital parameters with the corresponding lab reports and raise alerts to the caregiver. Integration with HIMS (Hospital Information Management System) and ChatGPT for subject matter reference & expert opinion.

Effective Clinical Data Management

Using the available clinical data, clinical decision support notifications are generated that aid in understanding the patients' current condition and changes over time.

Paperless ICU

Captures and associates patient care device data with demographics, reducing manual effort and enhance documentation accuracy and compliance. Digitizes periodic health data entry, enables electronic caregiver annotations, and integrates lab report digitally.

Smart Alarm Management

Captures alarm data from patient care devices, transfers it to a central station for management, and provides a centralized overview to identify actionable alarms for each patient.

Real Time Video Feed

Option to view the real time video feed of the patient to closely monitor the patient's physical state and provide necessary medical intervention whenever required.

Powered by agentic AI

AI assistant helps clinicians draft discharge summaries, progress notes, answer clinical queries, and powers Clinical Round Table AI Agents to summarize patient insights and flag risks—all under clinician control.
